

Emergency Management: Wildfire Services

Prepare. Respond. Recover.

Wildfires are now a year-round threat, requiring utilities to take a proactive, end-to-end approach to managing these increasingly intense events. Osmose® Emergency Management Services helps you stay prepared, respond effectively, and recover to system capacity.

Prepare.

Structural condition health assessments and grid hardening solutions to get you ahead of the next wildfire.

- Comprehensive field, drone, and infrared assessments
- Structural assessments, grid hardening preservatives, and restorative trussing
- Predictive analytics to forecast system vulnerabilities

Respond.

Immediate, scalable, boots-on-the-ground support to help restore power, quickly and safely.

- Damage assessment and post-event field inventory
- Line crew supply with rations, fuel, and materials
- Call center and staging site support
- Equipment and material distribution directly in the field

Recover.

Helping ensure your system can safely and reliably return to normal operations.

- Post-restoration cleanup and debris removal
- Hazard and damage identification, including downed wire surveillance
- Structural reinforcement and foundation enhancements
- System-wide patrols: transmission, distribution, streetlight, and drone-based
- As-built surveys and substation assessments for post-event documentation

Prepare, respond, and recover with confidence.
